

Automation and transparency at every level of the organization giving insight to the payments process.

BankingQ Features

3-way matching between Practice Management Systems, Banks, and Clearinghouses with Q-Balance

Rules based ERA splitting with Q-Parse

e-Conversion of paper EOBs into electronic files available with Q-Post

Payment Analytics

Q-Balance is engineered to make reconciliation an automated process, eliminating spreadsheets and the need to share information across multiple platforms. By automating the movement of data from your core systems (The Banks, Practice Management Systems, and Clearinghouses) all data is now housed in a single location and run across the rules database to balance down to the final dollar. Your organization is now in a position to save time, money, and employee resources.
